Key Safety Objectives
Aeropuerto Internacional Reina Beatrix

Aruba Airport Authority N.V. (AAA) has established five (5) Key Safety Objectives for Aeropuerto Internacional Reina Beatrix, aimed at minimizing safety hazards, incidents, and accidents within the aerodrome to a level that is as low as reasonably practicable. Safety remains the highest priority across all operational activities.

These five (5) objectives define AAA's commitment to proactive safety management and the desired safety outcomes:

Accident Reduction
Committed to minimizing risks through proactive hazard identification, thorough risk assessment, and effective mitigation of all reported safety concerns.

Safety Management System (SMS) Implementation
Ensure that an effective SMS is embedded in all its operations by allocating adequate human and financial resources. This fosters a strong safety culture, encourages open safety reporting, and promotes effective communication.

Safety Accountability
Ensure that all employees receive appropriate safety training and information, possess the necessary competencies, and are assigned responsibilities aligned with their skills and expertise.
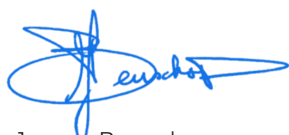

Regulatory Compliance
Adhere to all national legislative and regulatory safety standards and strive to exceed them whenever possible.

Fostering a Positive Safety Culture
Foster a robust safety culture across all AIRB operations by integrating safety management, communication, teamwork, situational awareness, problem-solving, decision-making, and leadership. Encourage continuous improvement, proactive hazard identification, and risk management while reinforcing a shared commitment to safety as the highest priority.

As our SMS continues to mature and improve, our safety objectives will evolve to reflect enhanced capabilities and effectiveness. AAA remains dedicated to the continuous advancement of its SMS to ensure the highest levels of aviation safety.
